1. **Muskmelon** — 39.00% suitability
2. **Chickpea** — 27.50% suitability
3. **Grapes** — 11.50% suitability
4. **Coffee** — 6.50% suitability
5. **Watermelon** — 6.50% suitability

📋 Advisory for Top 2 Crops

🌾 Muskmelon

🦠 Disease Risk: **High**

💧 Irrigation Advice: **1-2 days**

🌾 Chickpea

🦠 Disease Risk: **High**

💧 Irrigation Advice: **1-2 days**

🤖 AI Advisory

Why Muskmelon is Suitable 🥝

Muskmelon is a great crop for our farm conditions! It thrives in warm temperatures, and our average temperature of 29.87 °C is just perfect for it. This crop also loves dry soil, which matches our dry soil condition. Additionally, muskmelon is not too picky about soil pH, and our pH of 7.36 is just right for it. With proper care, muskmelon will grow quickly and produce delicious fruit for you and your family! 🍉

Disease Prevention Measures for High Risk Level 🚨

To prevent diseases, we need to take extra precautions. For high risk level, I recommend:

- Use fungicides to prevent fungal diseases like powdery mildew.
- Apply bactericides to prevent bacterial diseases like bacterial wilt.
- Keep the farm clean and well-ventilated to prevent the spread of diseases.
- Use resistant varieties of muskmelon to reduce the risk of disease.

Irrigation Advice for 1-2 Days 💧

Since the soil is dry, we need to water the muskmelon crop. I recommend watering for 1-2 days, depending on the soil moisture. Water the crop in the early morning or late evening to minimize evaporation. Make sure to water deeply to reach the roots, and avoid overwatering, which can lead to root rot. 💦

Rainfall Caution with 30-Day Rainfall of 0.0 mm ☔

With no rainfall in the past 30 days, we need to be cautious. Muskmelon needs consistent moisture to grow well. Since it's a dry crop, it can tolerate some drought, but prolonged dryness can affect its growth. Keep a close eye on the soil moisture and water the crop as needed. We might need to supplement with irrigation to ensure the crop receives enough water. 🌞
